

CrossBuy User Manual

One platform to run your business — Accounting, Inventory, HR and Sales — on a single ledger engine that posts every entry balanced automatically, in Arabic and English.

Living document · updated with every feature · Arabic edition: [CrossBuy_User_Manual.html](#)

0 Overview & system map

Before you start: every module talks to Accounting automatically. You never hand-key entries for daily operations — the system writes them balanced and guards their invariants.

■ Module map

Each arrow means “feeds entries into.” Any operation (payroll run, goods receipt, sales invoice) reaches Accounting as a balanced entry.

Everything is connected

Inventory, payroll and sales post their own entries via one engine (JournalEntryService). No manual entries for these.

Invariants never break

Inventory value = the inventory GL account · customer/vendor controls = their subledgers · the trial balance always balances. A daily integrity check guards them.

Two languages

Every screen is Arabic/English with correct alignment (RTL/LTR). Switch language from the menu footer or header.

Roles & governance

Inventory and accounting roles, segregation of duties, and approval thresholds for large amounts. Open until the first role is assigned.

1 Sign-in & navigation

■ Sign in

1 Open the system, enter your username and password, and click "Sign in."

2 You land in your portal by role: the back-office (admin staff) or the employee self-service portal.

■ Side menu

Each module has its own menu, organized into **collapsible categories**. Click a category to open it; the active item is highlighted. Use "Search menu" to jump to any screen.

Open any record Every table has a direct **"Open"**  button on its row that opens the record's card/detail immediately.

Employee portal

Shows only the employee's own links: profile, leaves, payslips and attendance — not the admin menu.

2 Human Resources

From the employee file to the monthly payslip and final settlement — with leave, attendance and documents in between.

■ Employees, structure & documents

1

"Employees": add the employee and their personal/job data (title, branch, department, joining date) and photo.

2

"Org structure": build the tree Company ← Branch ← Department ← Employee. It drives the approval manager and the cost center automatically.

3

"Contracts & documents": record contracts (start/end dates) and classified documents (ID/passport/qualification/insurance) with expiry dates. "Expiry alerts" shows what's due and can notify owners.

■ Leave cycle

Leave request

employee

**Approval chain**

climbs the tree

**Balance deducted**

work days only

**Encashment / provision**

when needed

- ◆ Only work days are counted (rest days & official holidays excluded), and the balance is checked.

- ◆ **Encashment:** pay unused days as cash (Dr leave-encashment expense / Cr bank); deducted from the balance.
- ◆ **Provision:** a liability for earned-but-untaken leave; only the difference is posted.
- ◆ **Annual carry-over:** unused balance carried into next year, capped by the policy limit.

■ Payroll cycle

Payroll entry	
Debit	Credit
Salaries expense 520101	Net payable 2103
Employer SI 520102	Tax 210205
	Social insurance 210204

Income tax uses configurable progressive brackets (personal exemption + insurable-wage limits) from "Payroll tax & insurance."

- ◆ **Payslips:** one per employee (earnings/deductions/net); the employee views and prints it from their portal.
- ◆ **Disbursement & remittance:** clears net 2103 via bank, and remits tax 210205 and SI 210204 to the authorities.

■ Termination & final settlement

Pick the employee and termination date; the system computes service years, leave value and a suggested end-of-service gratuity. Posting creates a balanced entry (Dr settlement expenses / Cr bank), deactivates the employee and closes the contract automatically.

■ Employee self-service

Employee portal → **My payslips** · **My attendance** · **My leaves** · **My profile**

The employee sees their payslips across months (view/print) and a monthly attendance summary with the daily log — their own data only.

3 Accounting & finance

The general ledger, the customer/vendor/bank cycles and the reports — all on one journal engine.

■ Essentials

- ◆ **Chart of accounts:** create/edit accounts; a collapsible tree with search. Control accounts aren't posted to manually.
- ◆ **Journals:** a balanced manual entry (for non-automated ops); the system rejects unbalanced or closed-period entries.
- ◆ **Cost centers & fiscal periods:** centers from the org tree, periods opened/closed to block posting by date.

■ Order-to-cash (customers)

Sales invoice	
Debit	Credit
Accounts receivable 1102	Sales revenue Output VAT 210201

Receipt	
Debit	Credit
Bank / cash	Accounts receivable 1102

The customer card holds full details (phone/email/contact/segment/credit limit/addresses), editable from the same screen. "AR aging" shows the aging buckets.

■ Procure-to-pay (vendors)

Goods receipt	
Debit	Credit
Inventory 1103	GRNI 210203

Payment	
Debit	Credit
Accounts payable 2101	Bank Withholding tax 210202

■ Banks, assets, tax & closing

- ♦ **Banks & cash:** bank accounts and cash boxes, transfers between them, and bank reconciliation against the statement.
- ♦ **Fixed assets:** categories, assets, periodic depreciation and disposal. Buying an “Asset”-type item auto-capitalizes it.
- ♦ **Tax:** tax codes, periodic VAT returns, and e-invoice (ETA) status.
- ♦ **Statements & closing:** trial balance and financial statements, plus a year-end close that moves profit to retained earnings.

4 Inventory & supply

■ Master data

- ♦ “Categories”: map each category’s accounts (inventory, COGS, adjustment, GRNI) — items inherit them.
- ♦ “Items”: code/barcode/UoM/type, multiple units and conversions, and composite (Kit) items. The item card shows analytics: last operation/purchase, average purchase & cost, last in/out dates, and a balance-over-time chart.

■ Inventory & costing cycle

- ♦ Batch, expiry and serial tracking; issues auto-pick the nearest expiry (FEFO) and block expired stock.

- ♦ Inter-warehouse transfers, stock counts & adjustments, write-offs (Dr write-off expense / Cr inventory), and landed costs that spread freight/duty onto item cost.

5 Sales & purchasing

■ Quotations

1 Create a quotation for the customer with its lines and validity ("valid until" date).

2 Change its status (sent/accepted/rejected), or click "Convert to order" — a sales order is created with the same lines and linked to the quote.

3 Each quote has an "Open" 👁 button to view its lines and status.

Reminder Open any document (order/invoice/note) from its list and click "View" 👁 to see its lines, value and the link to its journal entry.

6 Governance & invariants

■ Approvals & segregation of duties

Execute

- ♦ **Accounting roles:** Chief Accountant / Accountant / Cashier / Auditor — actions gated by role.
- ♦ **Inventory roles:** Warehouse keeper (their branch) / Purchasing / Inventory manager / Auditor.
- ♦ **Approval threshold:** large journals/payments require the Chief Accountant; a creator can't approve their own entry.

■ Period lock & integrity guard

- ♦ Any movement dated in a closed period is rejected with a clear message.
- ♦ An integrity reconciliation (and a daily check) verifies all invariants and alerts the owner before any drift accumulates.

7 Opening balances & go-live

1

Set the cut-off date, then enter: stock (item×warehouse×qty×cost), customer & vendor balances, fixed assets (cost and accumulated depreciation), and the remaining trial-balance accounts.

2

All balances offset against an "Opening balance equity" clearing account (3301) that must net to zero.

3

"Verify" checks: stock=1103, customer/vendor controls=subledgers, trial balance balanced, and 3301=0. Then "Finalize" locks entry.

After finalize

The system runs daily operations on top of these balances, with invariants guarded from day one.

- ♦ **Financial reports:** trial balance, income statement, balance sheet, aging.
- ♦ **Inventory reports:** valuation, slow-moving items, shortages, batches/expiry.
- ♦ **AI insights:** journal anomaly detection, cash-flow forecast, and inventory analysis — surfaced as suggestions to review.

Key accounts

Code	Account	Use
1102	Accounts receivable (control)	= sum of customer subledgers
1103	Inventory	= actual inventory value
1201/1202	Fixed assets / accum. depreciation	assets & depreciation
2101	Accounts payable (control)	= sum of vendor subledgers
2103	Payroll payable	net pay before disbursement
210203	Goods received not invoiced (GRNI)	goods received without invoice
210204/210205	SI / payroll-tax payable	deductions remitted to authorities
210201/110401	Output / input VAT	value-added tax
3301	Opening balance equity (clearing)	go-live — nets to zero

Glossary

- ♦ **GRNI:** goods received whose invoice hasn't arrived yet.
- ♦ **FEFO:** issue the nearest-expiry stock first.
- ♦ **Moving average / FIFO:** the two inventory costing methods.
- ♦ **Segregation of duties (SoD):** the document creator can't approve it.

- ◆ **Cost center:** an organizational unit expenses are attributed to.
